

PRAJYOTHI TALEKAR

Full Stack Developer

Berlin, Germany | vyotalekar77@gmail.com | +49-15206730657 | <https://prajyothi-talekar-portfolio.vercel.app/> | <https://www.linkedin.com/in/prajyothi/>

PROFILE

Full-Stack Developer with hands-on experience building production-grade MERN applications. Strong in React, Node.js, RESTful APIs, authentication, and cloud deployment. Background in firmware validation strengthens debugging and problem-solving abilities.

SKILLS

Programming: JavaScript, Node.js, React, Selenium WebDriver (Java), Tailwind CSS, HTML

Databases: SQL, MongoDB Atlas

Dev Tools: Git, GitHub, VS Code, Jira

Testing and Test Management Tools: Postman, Zephyr, HP ALM

PROJECTS

Netflix Clone Project | <https://prajyothi-netflix.vercel.app/>

Tech Stack: JavaScript, React, Node.js, Express, MongoDB Atlas, JWT, Mongoose, Cloudinary, Vercel, Render

- Built a **production-grade full-stack streaming platform** using the MERN stack with separate **user-facing client** and **Admin Dashboard** for content and user management.
- Developed a **React SPA** with React Router v6, Context API, and reusable components to deliver dynamic content browsing, hover video previews, full-screen playback, and personalized "My List" functionality.
- Implemented **JWT-based authentication and authorization**, protected routes, session expiration handling, and secure role-based access for admin operations.
- Designed and implemented **RESTful APIs** with Node.js and Express for users, movies, lists, and authentication; enforced schema validation and indexing with **Mongoose**.
- Applied **security best practices**, including encrypted passwords, CORS configuration, environment-managed secrets, and standardized error handling.

EXPERIENCE

Product Validation Engineer- UST GLOBAL

- Performed end-to-end BIOS and Firmware validation for Intel server platforms (pre-silicon and post silicon), ensuring compliance with design and platform requirements.
- Created detailed test plans, executed test cases, and documented results using HP ALM and Jira.
- Utilized Git for version control and Conducted basic API validation using Postman to verify data flow and system integration.

EDUCATION

Electronics and Communication Engineering - Sahyadri College Of Engineering & Management
